1. Introduction

RetailFlow is a retail management system designed to support daily store operations. It helps users manage stock, sales, suppliers, reordering, forecasting, and operational insights from a single platform.

With RetailFlow, users can:

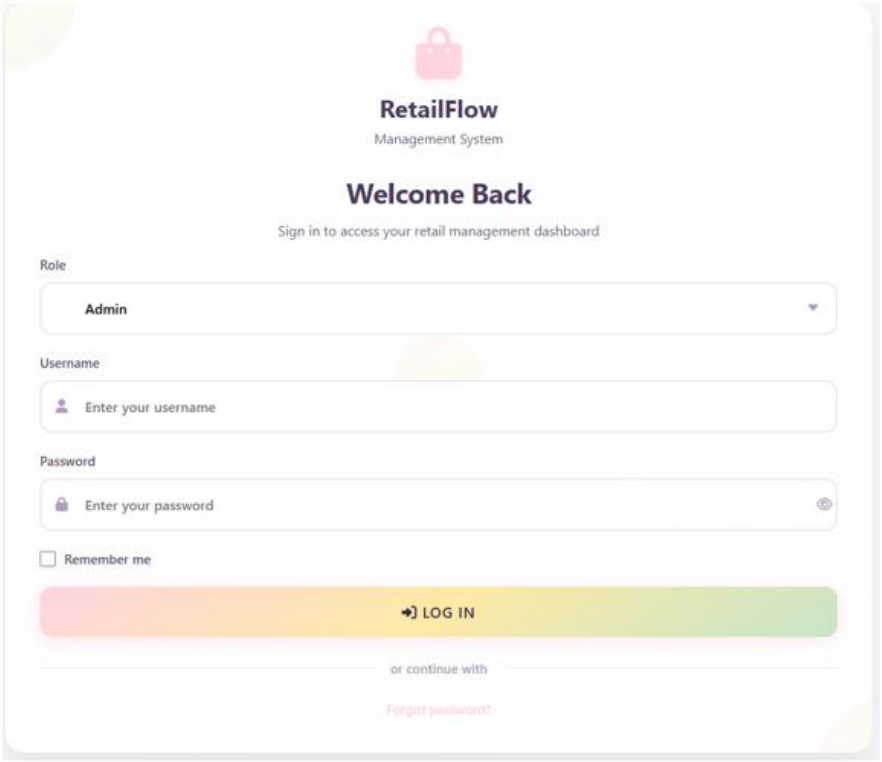

- monitor stock levels
- create and review sales
- manage suppliers
- create reorder request drafts
- submit reorder requests
- create and receive purchase orders
- view dashboard trends and forecast risk
- use the Retail Assistant for quick business insights

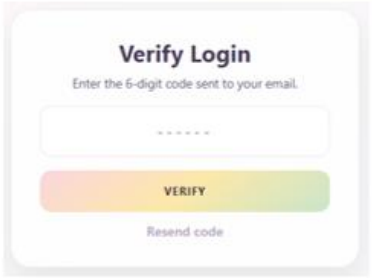

2. Getting Started

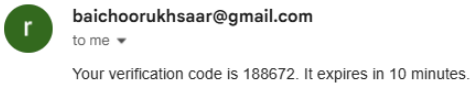

Before using the system:

1. Open the RetailFlow login page.
2. Select your role: Admin or Staff.
3. Enter your username and password.
4. Enter the 6-digit verification code sent to your email.
5. If you select Remember me, that device can skip verification for 30 days.

If you forget your password, use the Forgot password? option on the login page.

3. User Roles

Admin

Admins have full system access, including:

- Home
- Inventory
- Sales
- Dashboard
- Assistant

- supplier management
- purchase order management
- approval or rejection of reorder requests
- stock adjustment

Staff

Staff have access to operational features, including:

- Home
- Inventory
- Sales
- Dashboard
- Assistant
- creating reorder drafts
- submitting reorder requests
- editing their own draft or submitted requests

Staff cannot manage supplier master data or purchase orders. Stock adjustment is also restricted to Admin users.

4. Main Navigation

Home

Provides a quick overview of key alerts, shortcuts, and recent activity.

Inventory

Used to manage products, stock movement, stock levels, and product history.

Sales

Used to create sales, review sales history, and view sale details.

Suppliers

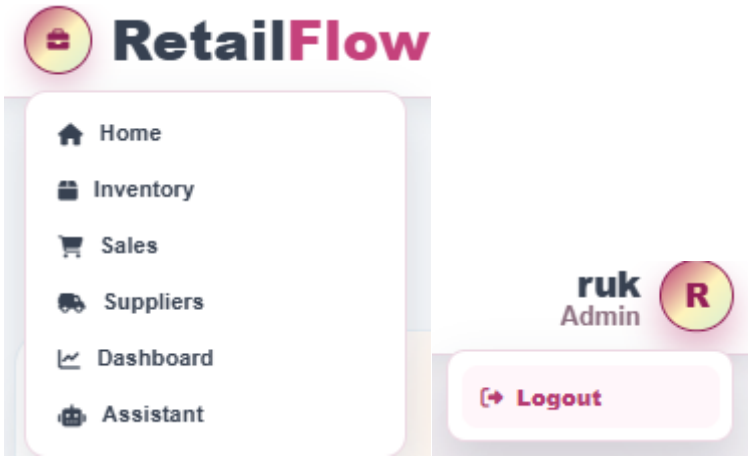

Used to manage suppliers, reorder drafts, reorder requests, and purchase orders.

Dashboard

Provides sales, stock health, forecast visibility, best-seller insights, and risk monitoring.

Assistant

Provides AI-based answers for sales, stock, reorder, and forecast-related questions.

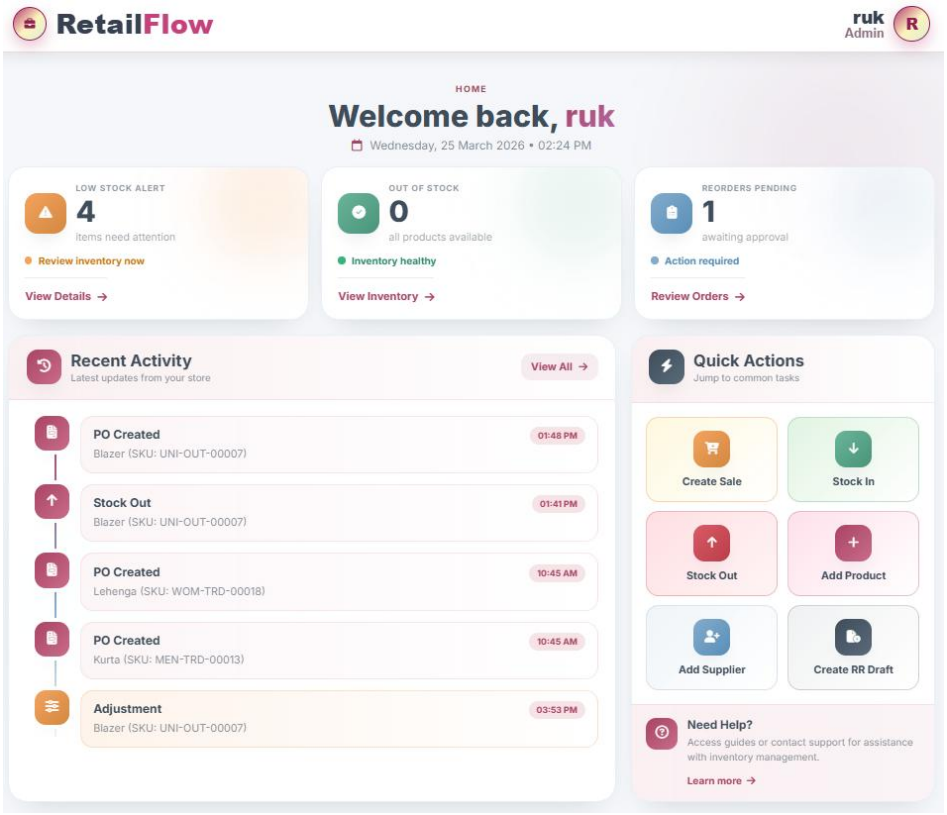

5. Home

The Home page is designed for quick access to key information and common actions.

Users can:

- view low-stock, out-of-stock, and pending reorder counts
- review recent activity
- use quick shortcuts such as Create Sale, Stock In, Stock Out, Add Product, Add Supplier, and Create RR Draft

The Home page is intended to help users begin daily work quickly.

6. Inventory

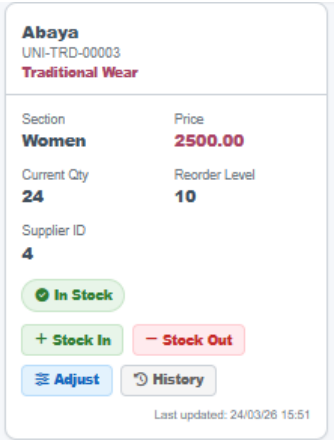

The Inventory page is used to manage products and stock movement.

6.1 Products

Users can:

- filter products by category, section, supplier, search term, or stock status
- view SKU, product name, category, selling price, stock quantity, and stock status

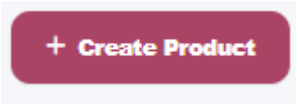

Note: All the action buttons also exist on each product cards for easier access.

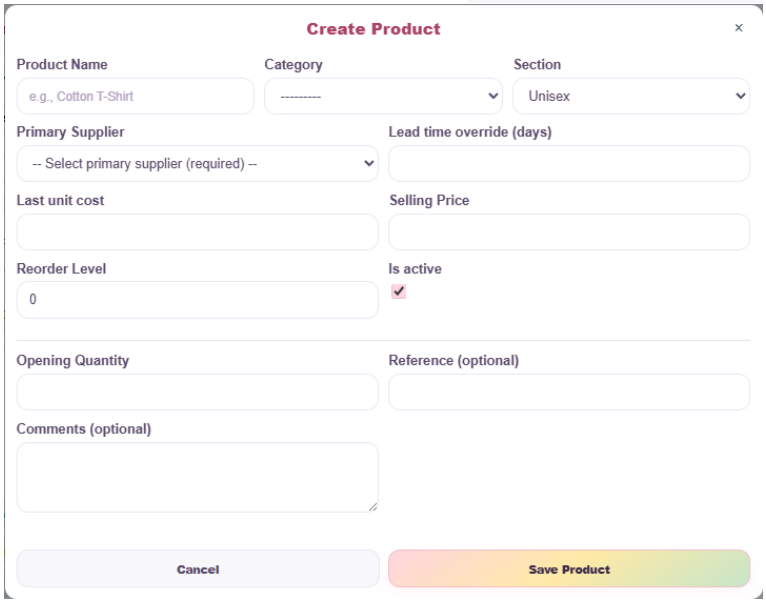

6.2 Create Product

Use this feature to add a new product.

Required or commonly used fields include:

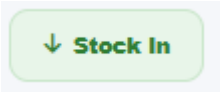

- category
- section
- selling price
- reorder level
- opening quantity
- primary supplier

Key rules:

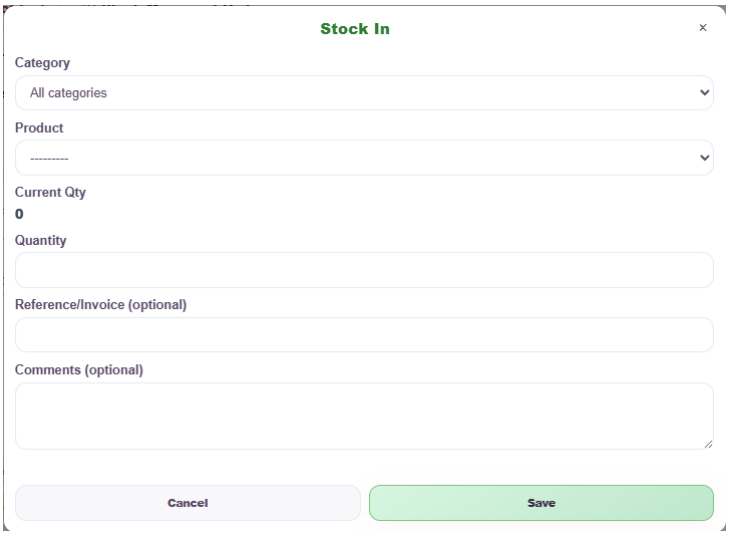

- a primary supplier is required
- opening stock is added immediately when the product is saved
- if the same active product already exists, stock may be added to that product instead of creating a duplicate

6.3 Stock In

Use Stock In when new inventory is received.

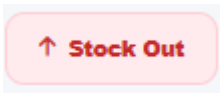

Users can:

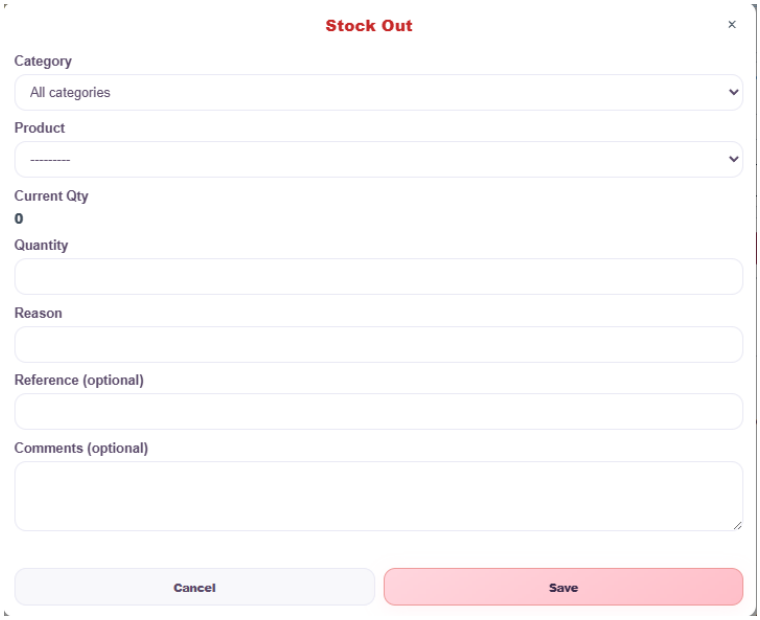

- select a product
- enter quantity
- add a reference or comments if needed

6.4 Stock Out

Use Stock Out for stock removed for non-sale reasons such as:

- damage
- shrinkage
- transfer
- other operational reasons

Users must:

- select a product
- enter quantity
- enter a reason

You cannot remove more stock than is currently available.

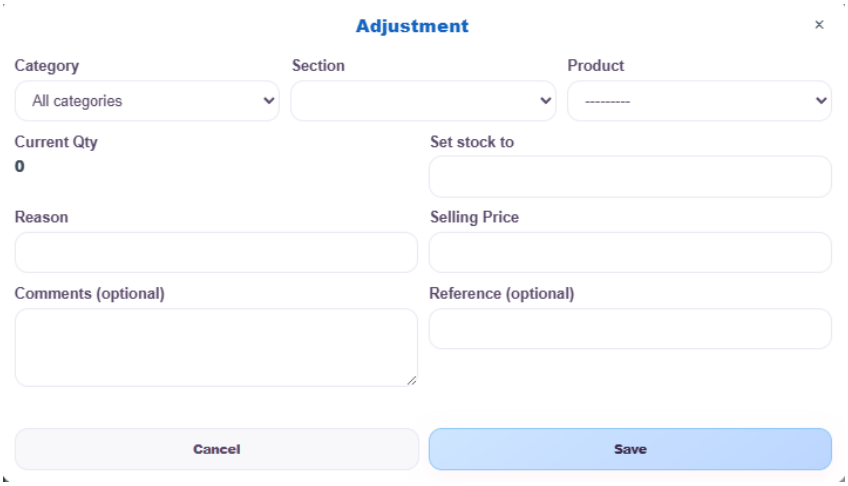

6.5 Adjust

Adjust is available to Admin users only.

Use it to correct:

- stock quantity
- product section
- selling price

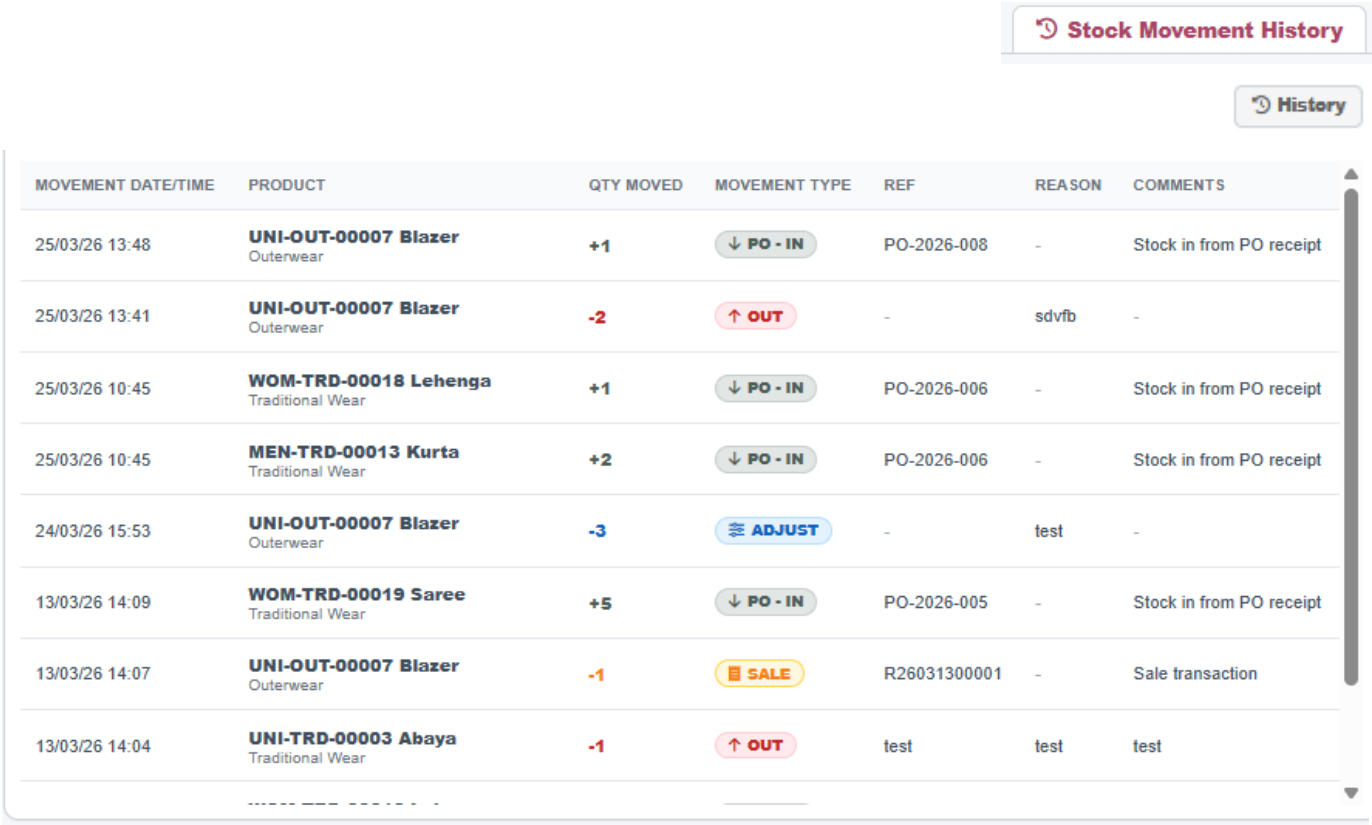

Users should:

- set stock to the correct value
- enter a reason
- save the adjustment

6.6 History

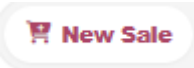

The History tab and the action button History (on each Cards) is used to review stock movement records, including stock in, stock out, sales, adjustments, and purchase order receipts

7. Sales

The Sales page is used to create and review customer transactions.

7.1 New Sale

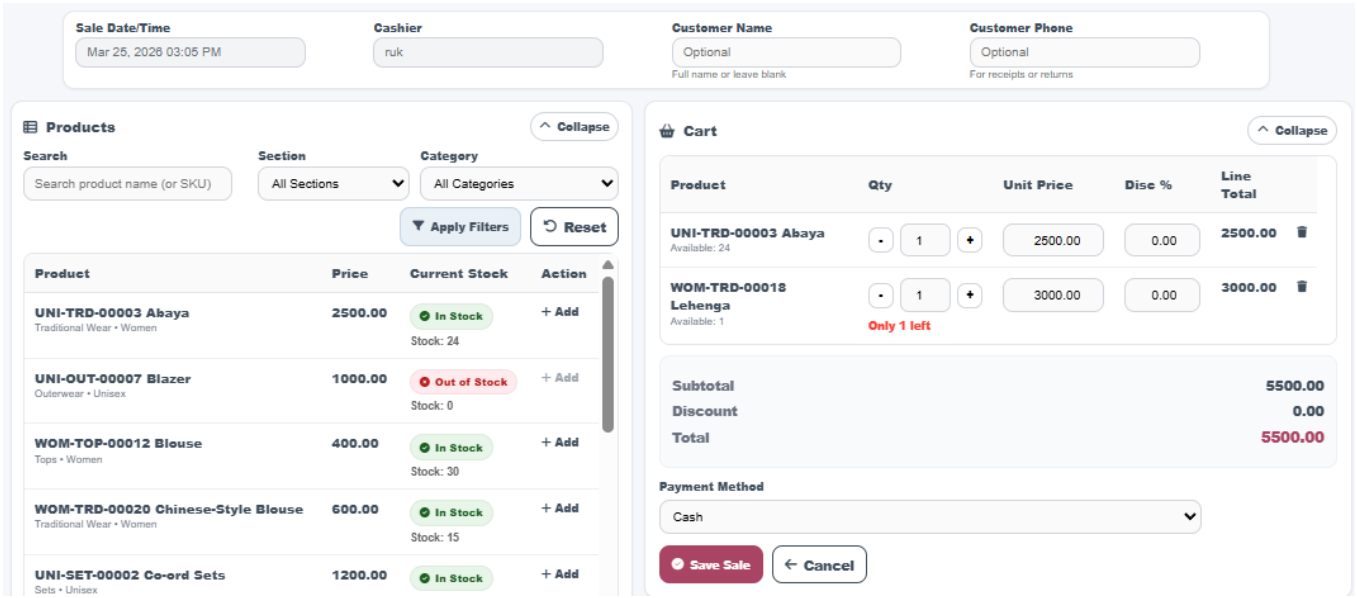

Users can:

- enter optional customer name and phone number
- filter products by search, section, or category
- add items to the cart
- edit quantity, unit price, and discount percentage
- select a payment method (Cash, Card, Mobile Payment, Juice, Other)

- save the sale

Important rules:

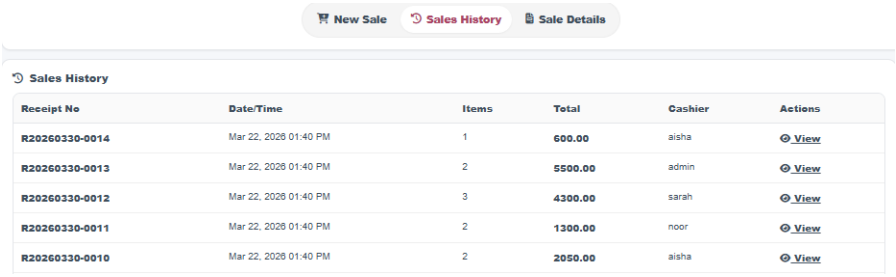

- out-of-stock products cannot be added
- the cart warns if quantity exceeds available stock
- stock is updated automatically when the sale is saved

7.2 Sales History

Users can:

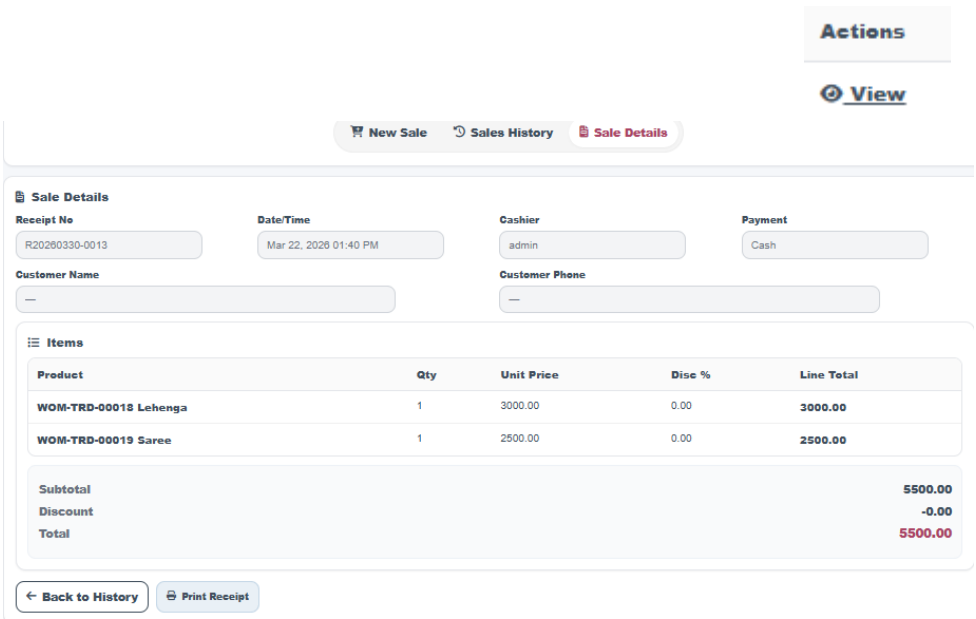

- review previous sales
- open a sale to view its details

7.3 Sale Details

Users can view:

- receipt number
- sale date and time
- cashier

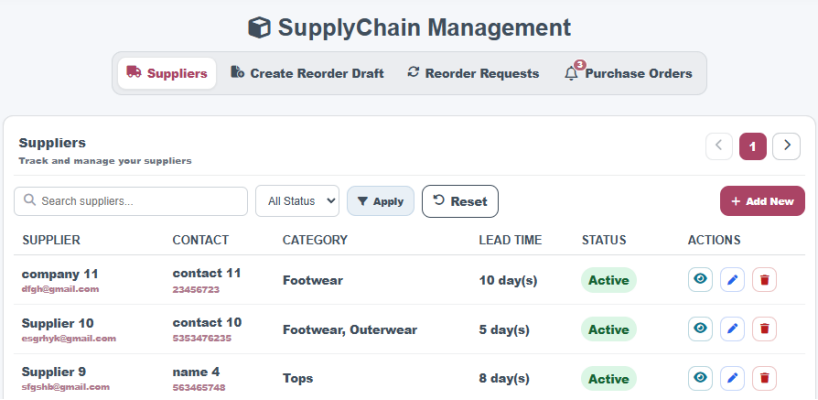

- customer information
- payment method
- item lines
- totals

The receipt can also be printed when needed.

8. Suppliers and Reordering

The Suppliers section supports stock replenishment and supplier management.

8.1 Suppliers Tab

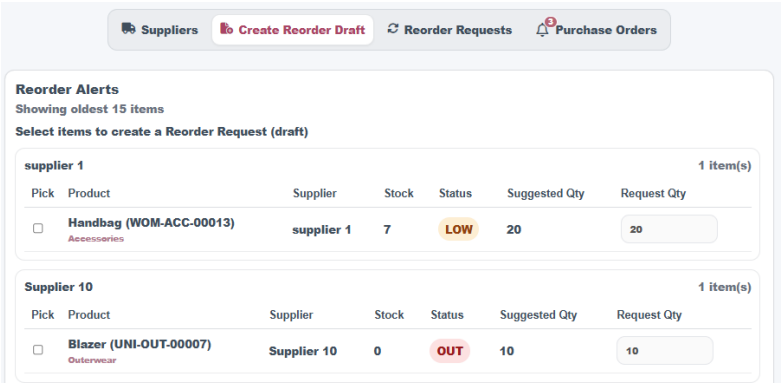

This tab is available to Admin users only.

Admins can:

- add suppliers
- edit supplier details
- assign supplier categories
- define lead times
- activate or deactivate suppliers

8.2 Create Reorder Draft

Use this tab to prepare restocking requests.

Users can:

- select products that need restocking
- enter required quantities
- create draft reorder requests

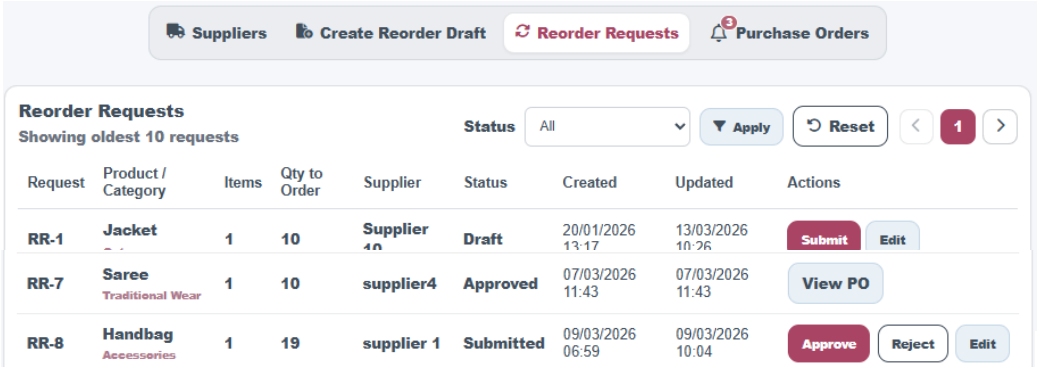

One reorder request is created per supplier.

8.3 Reorder Requests

This tab is used to manage draft and submitted reorder requests.

Possible statuses:

- Submitted
- Approved
- Rejected
- Cancelled

Staff users can:

- edit their own draft or submitted requests
- save drafts
- submit requests for approval

Admin users can:

- approve submitted requests
- reject submitted requests

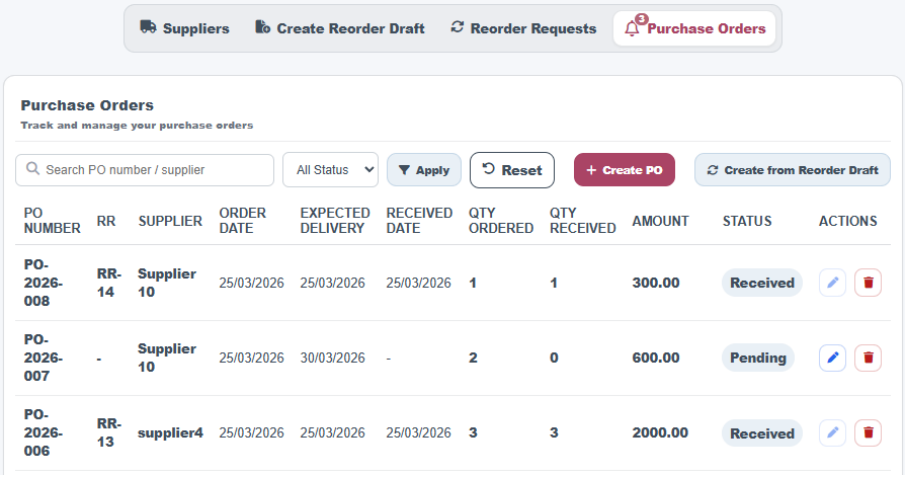

8.4 Purchase Orders

This tab is available to Admin users only.

Use it to create and manage purchase orders.

Possible statuses:

- Pending
- Received
- Cancelled

Key rules:

- only products linked to the selected supplier can be added
- received or cancelled purchase orders cannot be edited
- only draft purchase orders can be deleted
- when a purchase order is marked as Received, stock is added automatically

9. Dashboard

The Dashboard is available to both Admin and Staff users.

It provides a high-level view of business performance and operational risk.

Users can monitor:

- sales today
- sales this week
- sales this month
- forecast demand for the next 7 days
- forecast demand for the next 30 days
- inventory health
- sales trends
- best sellers
- category performance
- stock attention items
- forecasted festival demand

If forecast data has not been loaded, forecast-related sections may remain empty.

Retail Forecast Dashboard

Control-center view of actual sales, festive demand, category movement, and stock risk from Feb 25, 2026 to Mar 26, 2026.

From 25/02/2026 To 26/03/2026 Apply

Stock Attention

Current And Upcoming Stock Issues

Low stock, out-of-stock, and forecast risk items in one view.

21 in stock | 2 low | 1 out | 4 at risk

SKU	Product	Category	Stock	Forecast	Gap	Status
UNI-OUT-00007	Blazer	Outerwear	0	5.3	5.3	Out + at risk
WOM-TRD-00018	Lehenga	Traditional Wear	1	4.2	3.2	Low + at risk
KID-SWM-00003	KIDs Swimsuits	Swimwear	4	5.8	1.8	Low + at risk
WOM-ACC-00013	Handbag	-	7	8.5	1.5	At risk

10. Retail Assistant

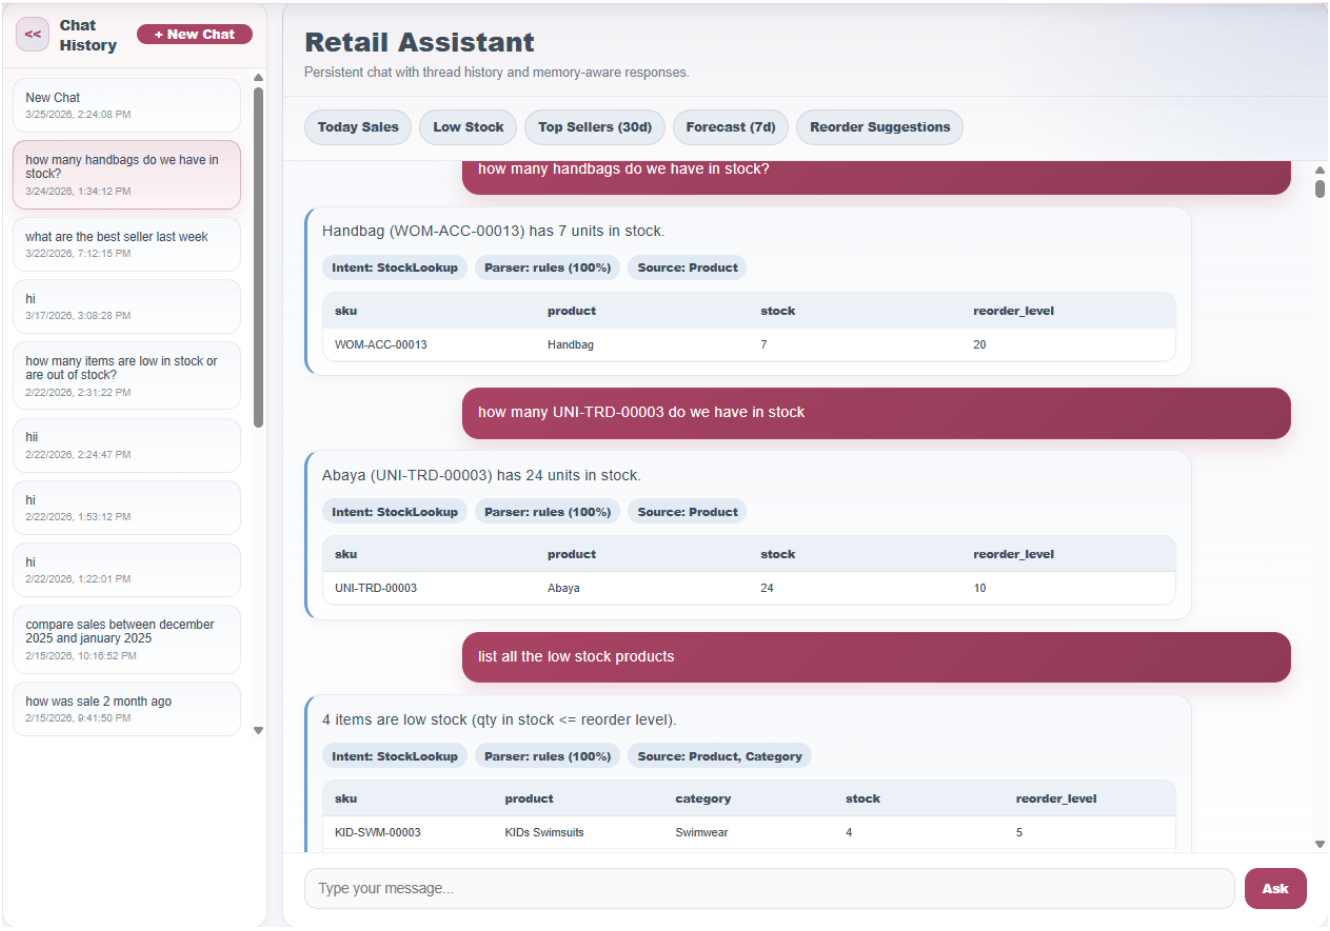

The Retail Assistant is available to both Admin and Staff users.

It is designed to answer business-related questions quickly, such as:

- total sales today
- low-stock items
- top sellers this month
- next week's forecast
- what should be restocked

Features include:

- persistent chat history
- separate chat threads
- quick question suggestions
- responses that may include charts or tables

11. Recommended Operating Practice

For best results:

- create products before recording stock or sales
- keep supplier-product links up to date
- use Stock Out only for non-sale removals
- use Adjust only for corrections
- mark purchase orders as Received only when stock has physically arrived

12. Common Issues

1. **Role Mismatch**
   The selected role does not match the user account.
2. **Invalid Code or Code Expired**
   Request a new verification code and try again.
3. **Insufficient Stock**
   Reduce the quantity before saving the transaction.
4. **Product Is Not Connected to the Chosen Supplier**
   Update the supplier-product link before creating the reorder or purchase order.
5. **No Forecast Shown on the Dashboard**
   Forecast data has not been loaded yet.

13. Summary

RetailFlow supports both daily retail operations and management oversight. Staff users can perform core operational tasks, while Admin users retain control over supplier management, purchase orders, approval workflows, and stock adjustments.
